

LUCAS FORNERO

Full-Stack Developer | Rafaela, Argentina | (+54) 3492 65-4119 | lucasfornero2012@gmail.com | DNI: 46995746 |
DOB: 20/12/2005 | [linkedin.com/in/lucas-fornero/](https://www.linkedin.com/in/lucas-fornero/)

PROFESSIONAL SUMMARY

Proactive developer with strong self-learning ability and a results-driven mindset. Experienced in managing projects independently from conception through production, with attention to detail and a commitment to quality. Comfortable working in both collaborative and self-directed environments, adapting quickly to new contexts and teams. Characterized by a problem-solving mentality, clear communication of technical decisions, and a strong focus on real product impact.

WORK EXPERIENCE

Subscription & Issuance Analyst | Sancor Seguros | Sunchales, Santa Fe *January 2026 – March 2026*

- Processed and validated over 40 technical policy quotes daily, ensuring compliance with company risk standards and reducing response times in the issuance cycle.
- Comprehensively managed the issuance center, successfully resolving more than 25 daily cases via email, prioritizing customer satisfaction and technical resolution of requirements.
- Designed and executed an Excel tracking matrix to categorize query patterns in the sector's inbox. This data contributed to a technical process automation proposal aimed at reducing manual administrative workload.

PROJECTS

WaspAI — AI Engineering Terminal — wasp-ai.vercel.app *March 2026 – Present*

Stack: Next.js 16 · TypeScript · Gemini Pro/Flash · Supabase · Tailwind · Playwright · Sentry · GitHub Actions

- Developed a productivity tool for development teams that reduces project scaffolding and setup time by an estimated 60%, improving user experience and directly impacting delivery speed.
- Built a complete CI/CD pipeline with GitHub Actions, E2E test coverage with Playwright, and production monitoring with Sentry, achieving builds under 2 minutes and zero downtime on updates — prioritizing reliability at scale.
- Managed the complete product lifecycle autonomously: from architecture through deployment on Vercel + Supabase, maintaining 99.9% availability and making product decisions with both technical and business judgment.

AquaControl32 — Real-Time IoT Monitoring System — github.com/lucasfornero/AquaControl32 *August 2025 – Present*

Stack: React Native · Expo SDK 54 · Node.js · Express · PostgreSQL · WebSockets · MQTT · Mosquitto · JWT · C++ · ESP32 · DS18B20

- Designed an end-to-end IoT solution targeted at non-technical end users, connecting hardware (ESP32 + DS18B20 sensors) with a React Native mobile app via MQTT and WebSockets, processing real-time data with latency under 500ms.
- Built a secure REST API with Node.js and Express, implementing JWT authentication to protect communication between devices and server — prioritizing security and scalability from initial design.
- Developed C++ firmware for ESP32 integrating the Mosquitto broker for reliable data transmission to the cloud backend, making autonomous architecture decisions across every layer of the system.

EDUCATION

Computer Engineering | National University of Rafaela (UNRAF) *March 2024 – Present*

Bachelor of Humanistic Sciences | National School N°428 Luisa Raimondi de Barreiro *March 2019 – November 2023* | Rafaela

TECHNICAL SKILLS

JavaScript (ES6+) | TypeScript | Python | C++ | React | React Native | Next.js 16 | Tailwind CSS | Node.js | Express | REST APIs | WebSockets | PostgreSQL | SQL | Supabase | Git | GitHub Actions | CI/CD | Vercel | Gemini API | LLM Integration | AI Agents | ESP32 | Arduino | MQTT | DS18B20 | Jest | Playwright (E2E) | Sentry | Scrum | Agile | TDD

LANGUAGES

English — Intermediate B1 | EFSET CERTIFICATE: <https://cert.efset.org/en/4YXVsi>
